

CorBusiness Applications Administration

DURATION

- ▶ 2 days
- ▶ 1 day in Asia-Pacific region

PREREQUISITES

- ▶ Completion of the two-day CorVu Applications I course, or equivalent experience with CorVu.
- ▶ Understanding of Windows functionality, relational database concepts and client/server functionality.

RESPONSE

What was the best part of the course?

“There is no single part—it was the synergy between the printed material and class participation that created ‘the best.’”

—Kevin Matthews, project manager, IT support, Caterpillar, Inc.

“Learning about security and complex queries and Knowledge Library.”

—Bill Loper, technical support, Epicor Software Corp.

Description

The Applications Administration course is designed for individuals responsible for the installation, implementation and administration of CorVu. It focuses on maintenance of the Knowledge Library, which provides the metadata layer between the CorVu software and the database being accessed. Additionally, set-up and operation of the CorVu Scheduler is covered in this class.

Topics covered

- CorVu architecture
- Connecting to an Access database
- Building the Knowledge Library
- Overriding the data type
- Creating and using pick lists
- Implementing data server manager security
- Implementing DynaMart security
- User name security
- Miscellaneous Knowledge Library topics
- Using the Scheduler
- Application portability
- Using the CorVu menu designer
- Assorted reference materials
